

Core Value Statements

Student Achievement

We believe that the purpose of education is to produce well-rounded, responsible (students) citizens who possess a balance of core academic and experiential (i.e. the arts, PE, technology, vocational, etc.) skills, (achieving at fullest potential) to be college and(/or) career ready.

Personal Growth

We believe that students should be given choices and personalized opportunities enabling them to develop social and emotional skills to become confident, self-reliant learners and productive responsible citizens in an ever-evolving world (society).

School Climate

We are a learning community of diverse abilities, interests and needs. A welcoming and supportive place where each member is valued; trusting that each member of our learning community shares a role in student learning and in maintaining a safe and respectful environment.

Resources

We believe all decisions should be transparent and made in the best interests of students, advocating responsible funding that supports academic excellence, appropriate facilities, quality materials and instruction while welcoming individual differences. We believe in the attraction and retention of quality faculty and staff, responsive to the changing needs of students.

Community Partnerships/Collaboration

We believe that providing a quality education for our children is a shared responsibility, fostered by active commitments and partnerships among the schools, families, businesses and the community at large, coming together to produce a better educational experience.
